

Doctors with a passion to help you look and feel your best!

BY DEB LEHMAN

Trained in medical and cosmetic services, Dr. Richard Schaller and Dr. Toni Marcheskie run a physician-performed cosmetic enhancement and anti-aging practice to help patients achieve their goals of happiness and well-being.

While many non-physician providers perform cosmetic procedures, Schaller and Marcheskie are board-certified doctors with many years of patient care experience. As trained emergency physicians, they recognized the relationship between healthy lifestyle decisions and longer, happier lives. To help patients achieve these goals, they became certified in medical weight loss, nutritional supplementation, and hormone balancing for men and women. They pursued additional medical training to offer patients cosmetic enhancement and anti-aging options, including:

Facial Cosmetic Treatments

YAG Laser treatment—Used for facial resurfacing and removal of wrinkles and irregular pigments—plus permanent hair removal and removal of abnormal vascular marking and birthmarks.

IPL (Intense Pulsed Light Therapy)—A *Viora* laser machine removes wrinkles as well as sun spots and marks. What's more, IPL can be used for permanent hair removal and treatment of acne.

RF (Radio Frequency) treatment—The *Viora* is also used for body contouring and firming of sagging skin and cellulite, as well as removal of wrinkles and irregular pigments and scars, especially long-term acne scars. RF achieves remarkable results for full facial rejuvenation and correction of blemishes and wrinkles. Furthermore, RF treatment provides vaginal rejuvenation for women who are experiencing vaginal dryness, pain with intercourse, or mild incontinence.

PDO threads: This technology, which uses specially designed surgical threads, builds collagen and stimulates the facial tightening process. PDO threads can be used in combination with facial fillers or Botox.

Platelet Rich Plasma (PRP) therapies—PRP is loaded with cell stimulating growth factors that help to regenerate your own bodies' cells. PRP can be micro-needled into the skin, resulting in facial rejuvenation, or can also be spread over the scalp to result in hair growth for men.

Body Contouring—The *Viora* can shrink excess fat on the waist or cellulite on the arms and legs.

Sexual Wellness—Rejuvenations offers treatments for both men and women to improve sexual desire and performance. Hormone balancing procedures and medications for erectile dysfunction are recommended for men. Women can be treated for hormone balancing and vaginal rejuvenation, as well as a new FDA-approved libido treatment called *Vyleesi*.

Medical Assisted Weight loss—Rejuvenations offers multiple medication assisted programs for weight loss. There are short term medication options to lose weight over a few months, and longer term options to help maintain weight loss including *Semaglutide*, a revolutionary new Peptide treatment.

Most cosmetic services are not covered by insurance companies. Hormone balancing and medical weight loss may be covered by insurance regarding lab work and medications. The staff will provide prior authorization requests.
